

Recommendation for Zvyagin Konstantin.

I highly recommend Zvyagin Konstantin as a software developer. I have business with Konstantin every year since 2009 . In 2009 I asked him to develop and install the "entrance control system" (ECS) for regular tournament "St. Petersburg OPEN" in Saint-Petersburg, Russia.

He developed this system very quickly by himself. Konstantin used cross-platform tools for develop this system, in particularly: Qt Development Framework and MySQL , that allowed him to use strong sides of C++ design and network flexibility for data access through MySQL server. And of course he is a perfect software developer. Also system makes reports devoted to questions: how many and when persons visited special areas or whole tournament in generally. After that, he integrated this system with accreditation system. ECS perfectly works till now. Also Zvyagin Konstantin provides support by installing and maintenance our ECS.
